

1,200 qualified students, no open seats in the class.

By 2018, 67% of jobs will require more than a high school education, and many of those jobs will be in the science, technology, engineering and math (STEM) fields. However, in 2012, 1,200 qualified students could not pursue Computer Science or Engineering degrees at our public universities because there were simply not enough seats in those programs. This is a grave disservice to our citizens who are facing a job market that will require higher education. Voice your support for public higher education funding now.
